

## How to pair Wii Balance Board to Unity

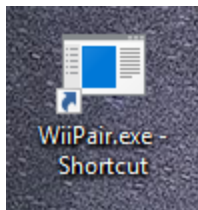

1. Open the Unity project and under the Hierarchy tab and click on the “Wii” object.

On the right under the Inspector tab, you should see this script:

2. Minimize the Unity window and look for the WiiPair script on the desktop.

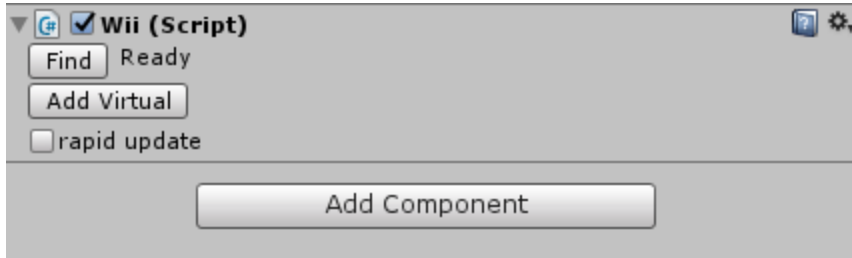

3. Open the battery pack for the balance board and find the red sync button.

4. Now, start the WiiPair script, and immediately afterwards, press the sync button on the balance board.

5. While the WiiPair script is running and the balance board is blinking, un-minimize the Unity window and put the mouse cursor on the “Find” button on the Wii Script

6. Keep an eye on the WiiPair script window. When it disappears from the taskbar, immediately click the “Find” button on the Wii script.

7. The Wii script should now look like this, and the balance board is connected:

## Troubleshooting

- Be sure that the computer has bluetooth or a bluetooth adapter plugged in
- If the Wii script says “error: -100 try again.” That means Unity couldn’t find the balance board. Close and reopen the unity project and start again from Step 1.
